

## **REMARKS**

### **INTRODUCTION**

In accordance with the foregoing, claim 1 has been amended. Claims 6-27 have been withdrawn. Claims 1-5 are pending and under consideration.

### **CLAIM REJECTIONS – 112**

Claims 1-5 were rejected under 35 USC 112, second paragraph, as being indefinite.

Regarding the rejection based on generating “a file” it is respectfully submitted that the function and meaning of generating a file is clear to someone of ordinary skill in the art. Further, the present application, in paragraph [0003], notes that a file is an interface displaying the configuration of the printer driver to a user.

Regarding the rejection based on “the device driver information,” appropriate correction has been made to claim 1 to provide antecedent basis for device driver information.

Withdrawal of the foregoing rejection is requested.

### **CLAIM REJECTIONS -- 102**

Claims 1-5 were rejected under 35 USC 102(e) as being anticipated by Gomez et al. (US 7,106,472) (hereinafter “Gomez”).

#### **Claims 1-3**

Amended claim 1 recites: “...generating a file for each functional component of the device driver and a user interface; rebuilding only a file corresponding to the functional component to be modified to make a device driver installation program when a modification of a functional component is needed; and reconstructing a device driver information using a file corresponding to the functional component selected by a user on the device driver installation program and generating an update to the device driver using the reconstructed device driver information.”

The Office Action relies on Gomez to show the features of claim 1. Specifically, the Office Action relies on Figures 2 and 3 of Gomez and the whole text of Gomez.

Considering the feature of claim 1 of generating a file for each functional component of the device driver and a user interface, the Examiner notes that this feature is anticipated by the

base module 24 and extended module 26 in Gomez. However, claim 1 recites generating a file for **each functional component of the device driver**. By contrast, Gomez only discusses modules which form a single file rather than generating files for each component.

To further emphasize the difference between the present invention as recited in claim 1 and Gomez, refer to Figure 4 of Gomez. As shown in Figure 4 of Gomez, a print dialog menu 36 typically includes a plurality of property sheets 38, accessible via selectors such as tabs. The property sheets display general attributes 40 of print job 38 common to all printing devices, such as the number of copies, or the page range of the document to be printed. The user may adjust values for these attributes via selectors 42. The property sheets further include user-adjustable printer-specific attributes 44, such as user-adjustable base attributes 46, and user-adjustable extended attributes 50. User-adjustable base attributes 46 are typically adjustable by a user via selector 48, while user-adjustable extended attributes 50 are typically adjustable via selector 52. It will be understood that user-adjustable base attributes 46 and user-adjustable extended attributes 50 are subsets of base attributes 16 and extended attributes 18, respectively, since not all of base attributes 16 and extended attributes 18 are typically adjustable by a user. See Gomez, 3:48-3:64 and Figure 4.

Specifically, in Gomez a user is required to sift through all of the various adjustable attributes to set up the print driver. By contrast, claim 1 recites generating a file for each functional component of the device driver that a user may then select to rebuild, and then the method of claim 1 reconstructs device driver information on the device driver installation program and further generates an update to the device driver using the reconstructed device driver information. Gomez does not discuss a method or apparatus capable of allowing a user to directly select only a functional component to be modified from among all of the functional components of a device driver through a user interface, where the selected functional component can then be independently modified, and then the modified result can be reflected onto the entire device driver. This technical aspect of claim 1 allows a user to flexibly install and use a printer driver.

Claims 2 and 3 depend on claim 1 and are therefore believed to be allowable for at least the foregoing reasons.

Withdrawal of the foregoing rejection is requested.

**Claims 4 and 5**

Claim 4 recites: "...an installation program maker which generates a file for each functional component of the device driver and a user interface and rebuilds only the file corresponding to a functional component to be modified to make a device driver installation program; and a driver generator which reconstructs information on the device driver to be installed using the file corresponding to the functional component selected by a user on the device driver installation program and generates an update to the device driver using the reconstructed device driver information." The Office Action relies on Gomez to show these features of claim 4. However, it is respectfully submitted that print driver of Gomez only discusses a single print dialog menu 36 that does not include a driver generator which reconstructs information on the device driver to be installed using the file corresponding to the functional component selected by a user on the device driver installation program and generates an update to the device driver using the reconstructed device driver information as recited in claim 4.

Claim 5 depends on claim 4 and is therefore believed to be allowable for at least the foregoing reasons.

Withdrawal of the foregoing rejections is requested.

**CONCLUSION**

There being no further outstanding objections or rejections, it is submitted that the application is in condition for allowance. An early action to that effect is courteously solicited.

Finally, if there are any formal matters remaining after this response, the Examiner is requested to telephone the undersigned to attend to these matters.

If there are any additional fees associated with filing of this Amendment, please charge the same to our Deposit Account No. 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
